PROFESSIONAL SUMMARY

Full Stack Developer with proven expertise in architecting and delivering scalable, user-centric web applications leveraging the MERN technology stack (MongoDB, Express.js, React.js, Node.js). Specialized in frontend architecture, backend system design, RESTful API development, and secure authentication mechanisms. Demonstrates strong capability in translating business requirements into robust technical solutions, optimizing development processes, and fostering collaborative engineering environments. Committed to delivering production-grade applications with clean code principles and maintainable architecture.

SKILLS

- **Frontend Technologies:** React.js, Redux Toolkit, RTK Query, Tailwind CSS, React Bootstrap, React Toastify, HTML5, CSS3, JavaScript (ES6+)
- **Backend Technologies:** Node.js, Express.js, RESTful API Architecture, JWT Authentication, Payment Gateway Integration
- **Database Management:** MongoDB, Database Schema Design, Query Optimization
- **Development Tools & Practices:** Git & GitHub, Postman, API Testing, Code Review Workflows, Version Control

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern – Scipy Technologies, Kerala, India Jun 2025 – Current

- Architected and deployed responsive user interface components using React.js and Tailwind CSS, maintaining visual consistency and functional integration across product pages and feature sets.
- Established a reusable component architecture to reduce code redundancy, standardize design patterns, and accelerate time-to-market for new features across the development lifecycle.
- Validated API contracts and endpoint functionality using Postman, identifying issues prior to frontend implementation and reducing post-deployment defect rates.
- Enhanced user experience by optimizing interactive elements including transitions, hover feedback, and visual state indicators to streamline user workflows.
- Constructed full-stack application features using React frontend with Node.js backend services, ensuring alignment between client-side state management and server-side business logic.
- Executed collaborative development practices within Git/GitHub environment, including branch management, pull request reviews, code quality assurance, and distributed version control.
- Coordinated with product and engineering stakeholders to translate requirements into technical specifications, address architectural concerns, and deliver solutions aligned with product roadmap.
- Diagnosed and resolved performance issues by analyzing rendering efficiency and API call latency, implementing optimizations to enhance application responsiveness.

PROJECTS

Denstack – Hospital Management System

MongoDB, Express.js, React.js, Node.js | Healthcare Operations Platform

Developed a comprehensive hospital management application to modernize patient information systems, clinical scheduling, and multi-facility operations. Constructed MongoDB data model to secure patient records, appointment data, and clinic workflows with appropriate access controls. Developed analytics and reporting capabilities to track operational metrics, enabling administrators to optimize resource allocation and clinical workflows. Integrated security protocols and permission hierarchies to ensure confidentiality of medical information and enforce role-based access policies.

Mpact – E-Commerce Full-Stack Application
React.js, Node.js, MongoDB, Redux Toolkit, JWT, RazorPay API | Complete E-Commerce Solution
Built production-grade e-commerce platform with comprehensive product catalogue, cart management, user authentication, and secure payment processing. Implemented centralized state management using Redux Toolkit to synchronize cart state, product data, and user sessions across application components. Deployed JWT-based authentication system with session management to protect customer accounts and transaction data. Integrated RazorPay payment processor to enable live payment authorization and settlement within the transaction workflow. Differentiated user interface with scroll-based animations and page transitions to create premium customer experience.

Base Performance – Fitness & Court Booking Platform
React.js, Node.js, Tailwind CSS | Sports Facility Booking System
Engineered interactive booking application to enable customers to discover and reserve court time and training sessions with live availability display. Implemented responsive design framework supporting optimal user experience on mobile devices, tablets, and desktop browsers. Created multi-step booking workflow with confirmation and scheduling components, providing clear navigation and data validation throughout the reservation process.

MRS (Movie Recommendation System)
HTML, CSS, JavaScript | Personalized Content Discovery Engine
Constructed dynamic recommendation interface using vanilla JavaScript and DOM API to display curated movie suggestions from external data sources. Leveraged asynchronous programming patterns to fetch and render recommendations with minimal delay.

Parallax Website – Car Showcase
HTML, CSS, JavaScript | Interactive Product Display
Developed scroll-triggered parallax website showcasing automotive products with layered visual depth and optimized rendering performance across device types. Applied CSS animation optimization and event delegation to maintain smooth scrolling experience.

Kerala Tourism
HTML, CSS, JavaScript | Destination Information Portal
Created responsive tourism website featuring multi-section layout, intuitive navigation, and mobile-first design to serve primary mobile audience.

EDUCATION

Bachelor of Computer Applications – University Institute of Technology, Kerala, India Apr 2025
Specialization: Computer Applications

CERTIFICATIONS

- Diploma in MERN Stack (2025)

LANGUAGES

- English
- Hindi
- Malayalam

Dear Hiring Manager,

I am writing to express my interest in the Full Stack Developer position at your organization. I hold a Bachelor of Computer Applications and a Diploma in MERN Stack, with hands-on experience developing scalable and responsive web applications using MongoDB, Express.js, React.js, and Node.js. Through my professional internship at Scipy Technologies and multiple full-stack projects, I have developed strong capabilities in frontend development, backend engineering, RESTful API integration, database management, authentication, and modern web application architecture.

In my current role as a Full Stack Developer Intern, I develop responsive React.js interfaces using Tailwind CSS, build reusable component architectures, integrate frontend applications with Node.js backend services, and validate REST APIs using Postman. I also work extensively with Git and GitHub, including branch management, pull requests, code reviews, and collaborative development workflows. My project experience includes developing a hospital management system, an e-commerce platform with RazorPay payment integration and JWT authentication, and a sports facility booking platform with live availability and multi-step booking workflows. These projects have strengthened my ability to transform functional requirements into reliable, user-focused technical solutions.

I am particularly interested in opportunities where I can contribute to the development of high-quality digital products while continuing to grow as a software engineer. I bring a strong foundation in JavaScript, React.js, Redux Toolkit, Node.js, Express.js, MongoDB, RESTful APIs, JWT authentication, and responsive UI development, combined with a commitment to clean code, performance optimization, maintainable architecture, and continuous learning. I would welcome the opportunity to discuss how my technical skills and project experience can contribute to your development team.

Thank you for considering my application. I look forward to the opportunity to contribute to your organization and discuss my suitability for the Full Stack Developer role.

Sincerely,
Anoop S R
